

Speculum Perspectivæ Uranicum

Dr. An

ALMANACK

For the

Year of Christ 1676.

Being the Bissextile or Leap Year;

And from the Creation of the World 5625 years.

Since the Death of our Saviour 1643 years.

Since the Conquest of William Duke of

Normandy 610 years.

Since the Flood of Noah 3969 years.

Since LONDON was Built 2783 years.

Since the Restauration of King Charles II. 16 years.

Since London was Burned 10 years.

Since London was Re-built.

Wherein is contained

A true Description of the Year, and of the several parts thereof, according to the *English* and *Foreign* Account, with necessary Tables and Observations of worth, with a just account of such Eclipses as will happen this Year.

Calculated

for the Meridian of the Ancient and Famous City of London, whose Latitude is 51 degrees and 32 minutes and may serve without sensible error for any part of England.

Collected and Published by

LANCELOT COELSON,

Student in Astrology and Physick,

LONDON,

Millary Term begins January 24, ends February 12, and hath 4 Returns, Octabis Hillarii, Quindeno Hillarii, Crastino Purificationis, Octabis Purificationis.

Easter Term begins April 12, ends May 8, and hath 5 Returns, Quindeno Pasche, Mensa Pasche, Quirque Pasche, Tres Pasche, Crastino Ascensionis.

Trinity Term begins May 26, ends June 14, and hath 4 Returns, Crastino Trinitatis, Octabis Trinitatis, Quindeno Trinitatis, Tres Trinitatis.

Michaelmas Term begins October 23, ends November 28, and hath 6 Returns, Tres Michaelis, Mensa Michaelis, Crastino Animarum, Crastino Martini, Octabis Martini, Quindeno Mart.

Would men be just, so Terms we need not stand.

But live in Love and Peace throughout the Land :

Now Law with Tricks of Knaves is so base,

The Suit proves worse, than losing of the debt.

Hang't, hang't, refer the Case, and ease your fury,

The Judge will do as well as Judge and Jury.

378 Cocton, 1676.

James 1	1566	1602. March 14	23	11100. Mar. 17	Westminster.
Charles 1	1600	1625. March 27	25	111028. Jan. 30	Windsor.
Charles 2	1630	1648. Jan. 30	Whom God grant long to Reign.		

Great CHARLES, our six and twentieth Monarch Reigns,
 Since Conquering William mounted Britains Throne,
 Happy that Nation such a Prince obtains
 Whose Vertues well as Birth, deserves a Crown;
 Under his Conduct may we long remain,
 And may he then an heavenly Kingdom gain.

Coelson, 1676.

A Table shewing the time of the Moons coming to the South, and quantity of her shining.

The Moons Age.		Moons Southing and shining.		The Moons Age for her shining.	
1	16	0	48	1	29
2	17	1	36	2	28
3	18	2	24	3	27
4	19	3	12	4	26
5	20	4	0	5	25
6	21	4	48	6	24
7	22	5	36	7	23
8	23	6	24	8	22
9	24	7	12	9	21
10	25	8	0	10	20
11	26	8	48	11	19
12	27	9	36	12	18
13	28	10	24	13	17
14	29	11	12	14	16
15	30	12	0	15	

The Use of the Table.

First find the Moons age in the first Column, and next against the same, towards the right hand, is the time of her coming to the South, which from the New Moon to the Full Moon, is always in the afternoon, but from the Full Moon to the New Moon, it is always in the morning.

Example :

The fifth day of May this year 1676. the Moon is 3 days old, which I find in the first Column, against which towards the right hand in the second Column I find 2 24: so that being before the Full M. I conclude the Moon cometh to the South at 24 min. past 2 of the clock afternoon. To

Coction, 1676.

To find how long the Moon shineth, and what time she Riseth and Setteth.

For the Moons shining, enter the third Column with the Moons age, and against the same towards the left hand, is the time of her shining, which all the time of her increase being added to the hour of the Suns rising, which you will find in its true place, it will give the time of the Moons rising; but if the same quantity be added to the time of the Sun setting, it will give the time of the Moons setting, if after the Full Moon, take the quantity of her shining from the Suns rising, and you shall have the Moons rising; and if you take the same from the Sun setting, it gives the time of the Moons setting.

Example.

The fifth day of *May* before mentioned, the Moon is 3 days old, which I find in the third Column, in the first row descending, and against the same I find in the second column 2 h. 24 min. for the time of her shining, which being added to the time of the Sun rising 4 h. 12 min. it giveth the time of the Moons rising at 6 h. 36 min. that is, viz. the Moon riseth at 36 min. past 6 in the morning.

Again, to the time of the Sun setting 7 h. 48 m. I add the time of her shining 2 h. 24 min. and the aggregate is 10 h. 12 min. for the time of her setting that night, viz. the Moon sets that night at 12 min. past 10. and so of any other day or night, when you desire to know the rising or setting of the Moon.

This is as near the truth as can be obtained from any common Rule, however these serving for the memory, will often come very near to the truth, and may be very profitable where better helps are wanting.

In time, when incouraged, God blessing me with life and health, I may present thee with another methodical way, more exact to the truth than can be obtained by this or any other common rule.

Coellen, 1676.

In these three Tables you have the Interest due upon any sum of money, from a shilling to 100 l., over the head of the Table is the denomination of the time; under that, over the head of the common Angles, are the letters [l] signifying pounds, [s] shillings, [p] pence, [f] farthings.

Gallants beware, 'tis not your Interest sure,

Such sums on Interest daily to procure;

'Tis a vile Cancer in a fair Estate,

And eats whole Manners as a mighty rate.

Keep punctually your Credit from abuse,

And have no more of paying use on use.

Coelson, 1676.

A Table of Expence, which at the first view
is easie to the meanest Capacity, there-
fore needs no example to unfold it.

On the 14 day. S. Valentine, Priest. suffered Martyrdom under Claudius the Emperor. for not worshipping the heathen Gods, Anno 271. first being beaten with staves, then afterwards be-headed; men and women (as taught by the custom of birds) to chuse their friendly mates, do present them presents, some think [this] Valentine was the Author of the fancy.

August 1676.

334

Month Days,

Week Days.

On the 1 day is mentioned William Byrd, upon a story of John Partridge, a Scotchman of Kilmarnock, who was the son of a Hater, would bequeath their land to the Virgin Mary, the Virgin Mary in acceptance thereof, took the story, appeared, and ordered them to build a Church upon a piece which should be found next day covered with snow, which happened to be Mount St. Mary's, where now is the City, and bear the Virgin's Name.

Month days,
Week days,

On the 5th of this month mentioned Gorgonius martyr;
this Gorgon. was a great man, & Chamberlain to
Dionysius the Emperor, who siding with the Chris-
tians for tearing down the Emperours Edicts, (in
the City of Nicomedia) was cruelly tortured, and
after that on this day put to death. Anno 280.

October 1676.

402

On the 14 day you had mentioned Calixtus Pope
and Martyr, who first introduced the 4 Ember
days, or times of fasting, called Quatuor Anni
Tempora, and was for his zeal to the Christian
Faith cruelly beaten by the command of Severus
the Emperour, and afterwards on this day Anno
224. had his neck broke out of a window.

On the 28 day is mentioned Innocents, on which day Herod commanded all young Children to be slain, hoping thereby to have murdered our Saviour: In this Massacre his own Son was killed, for which the Noble Emperor Augustus Caesar said this Ironical Proverb on him, That it were better be Herods, Swine, than his Son.

A plain and easie Rule for the Moons Rising
and Setting.

At the New Moon she riseth and setteth with the Sun,
At the Full Moon she riseth when the Sun sets,
At the beginning of the Increase, she riseth after Sun
rising, and sets after Sun sets,
At the beginning of the Decrease she rises a little af-
ter Sun set, and sets a little before his rising,
In the first Quarter of her Increase, she riseth about
noon, and sets about midnight.
In the second Quarter of her Decrease, she riseth at
midnight, and sets about noon.
And hence you may compute near enough for com-
mon use, the time of the Moons rising and setting,
only observe, she riseth every day slower, than on
the other, by about 48 minutes.

Thus as the Moon seems to impress of the night,
Yet shines not, but with a Sun-borrowed Light;
So though vain man, seem to do or will,
He owes all to Divine Assistance still.

COELSON 1676.

AN
APPENDIX

To the preceding

ALMANACK

For the Year of our Lord God

1676.

Being the ~~Third after Bissextile~~ or *Leap-Year*

Wherein you have an account of such
Eclipses as will happen this Year.

With several necessary Tables, and other
Things Worthy to be observed, useful for all
sorts of People.

LIKEWISE,

Some brief Predictions of the state of the Year
upon the Sun's Entrance into *ARIES*,

AS ALSO,

A Chronography of the 4 Quarters of the Year

Collected, Composed, and Published,

By LANCELOT COELSON,

Student in ASTROLOGY and PHISICK.

L O N D O N.

Printed for the Company of Stationers, 1676.

Of the Eclipses that will happen this year 1676.

THERE will be conspicuous to the habitable world Two Eclipses, and both of the Sun.

The first Eclipse of the Sun happens on June 1st. at our 10 of the Clock in the morn. and will be visible to us; It will be celebrated in 21 Degr. of Π , in the 11th Angle of the Heavens [as to us] and the Ascendant of LONDON: It will appear total about the Hesperides or Canary Islands; and will be seen also to such as inhabit Greenland, or that navigate in the North sea; Likewise in Hispaniola, Cuba, &c. and in several other places, but not in all places alike.

The second Eclipse of the sun happens on Nov. 25. about our 8 a Clock in the morning; if the weather prove fair we in England may behold the defect, by reason the sun rises to us eclipsed; this eclipse will be visible also in the Kingdoms of Bissara, Benin, in New Guinea, Madagascar, Virginia, and also in the Ethiopick Ocean, &c. and many other places.

In this year also will be celebrated a notable Conjunction of Saturn and Mars, with the Pleiades, or that Constellation vulgarly called the 7 Stars, it happens on the 15 day of July, and may be seen a little after midnight in the East parts of the Heavens, and perhaps the Trine of Jupiter & Venus, which happens that evening, may occasion a good and clear Air for the purpose, though it may not last long.

Of the Four Quarters of the Year.

THe Spring takes his beginning when the sun toucheth the first scruple of Aries, which happens this year March 9, 10 min. past 4 afternoon, who by his glorious appearance makes the earth to smile, coming to revive what frowning winter had almost destroyed. This season is by nature hot and moist, the most temperate time of the year; a very convenient time to take Physick, to unburthen nature of all such humours as do oppress her, either by Purging, Bleeding, or otherways as occasion shall permit. This Quarter the body of Man is incident more than at other times, to Feavers, Jaundies, Impostumes, swellings, Quinsies, Boils, Itch, Pushes, Pox, Bleeding at Nose, spotted Fever, and such other Diseases occasioned by the quantity or quality of blood.

Of the Summer Quarter.

THis Quarter takes its beginning when the Sun toucheth the first scruple of the Tropical sign of Cancer, causing longest day and shortest night to all on this side the Equator, which this year happens on the 10 of June 37 min. past 7 at night,

This season by nature is hot and dry, causing the humours of man to be suitable to his own nature, fatts Cattle, and brings all Fruits to ripeness, increasing the rich mans store, and maketh the earth fat with the bodies of Men, Women, and Children, by reason of those so many Diseases now subject to nature, (viz.) Burning Feavers, Phrensies, Inflammations, Imposthumes, Ulcerations of the Lungs & Bladder, heat in the Reins, the Gonorrhea, Iliack Pashon, and such Diseases which proceed from Cholar.

C The

Coelion 1676.

The Autumn Quarter.

TAkes his beginning when the Sun toucheth the first scruple of the sign Libra, which happens this year, September the 12th. about ten in the morning.

This season is very variable and unconstant causing warm dayes but cold nights, and the body of man incident to bad diseases as at any time of the year, (viz.) Fistulaes, Fluxes, Hemorrhoides, Dysenteries, pain of the back, side, and stomack, occasioned by wind, pains in the Reins, stone, suppression, palsies, convulsions, madness and distraction, occasioned by melancholy, obstruction of the spleen, and such diseases thereby occasioned.

The Winter Quarter.

TAkes his beginning when the Sun toucheth the first scruple of the Tropick of Capricorn, causing shortest days and longest nights, to all on this side the Æquator, and is a great Antagonist to the Spring, a destroyer of the fruitful Harvest, and a disgrace to Summer, which happens this year December the 10th. 49. minuts, past 9. at night.

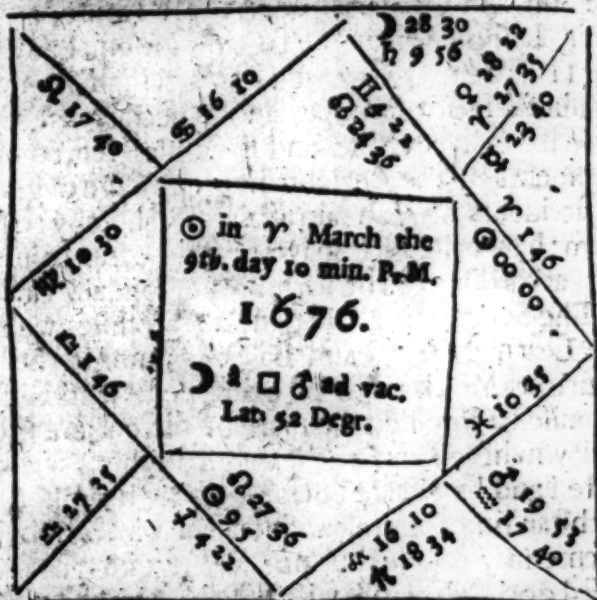

This season is by nature, cold and moist, no great pleasure to the weary Traveller, and causeth many obstructions in the bodies of old People, and others who are incident to receive colds, coughs, rhumes, palsies, polies, cramps, convulsions, vertiges, epilepsies, apoplexies cholicks, hoarseness, fluxes, pain in the teeth, noise in the ears, agues of all sorts.

*See how the Springs fresh Beauties do decay,
Sun-burnt by Summers more robustious Ray;*

De-

412

*Declining Autumn near seconds, and then
 We're wrapt in heavy Winters arm again:
 So blooming Youth by Man-hood is o're ta'en,
 And Man-hood struggles with Old age in vain;
 There's nothing stable, various Scenes obtrude,
 And all the world's but a vicissitude.*

Sol enters Cancer June 10th. 37 m. past 7 at night.
 Sol enters Libra Sept. 11th. at 10 in the morning.
 Sol enters Capricorn Decem. 10th 49 m. past 9 at night.
 By the Revolutions of the years of the World, is known
 what will ensue in this year, whether good or ill, peace or
 war, plenty or scarcity; also the state and condition of all
 sorts and degrees of men in general.
 In this Vernal Figure the earthy Sign *Virgo* ascends the
 Horoscope, and that part thereof which all Astrologers ac-
 count the face or decanate of the Sun, *Prima facies est solis*
& est seminandi & orandi Herbarum populationum congre-
gandi divitias & dirigendi victum suum; Haly de Jud. Astro.
 lcl. 4. The first face of *Virgo* is of the Sun, and is a face
 C 3 of

of sowing, Plowing, Planting Herbs, Peopling, gathering together Riches and food; If so, then we may expect a fortunate year in the general, which I pray God may prove so; But in respect the Sun and ♀ are posited in the 8 House, and ♂ their Dispositor in □ to the Moon Lady of the 11; we may very well fear we shall in some measure fail of our hopes and expectations.

We have divers Rules and Examples left to us as Presidents by the Antieuts how to judge of general accidents or Mundain affairs, & thereby to inform the world what may probably occur to mortals, according to the natural & secondary causes.

The Scheme it self in general, promises well to the Learned Clergy and Lawyers; nor is the industrious Merchant to be exempted, who is also promised a considerable share of success and prosperity in his affairs, the ♀ and ☿ in the 9. well affected and befriended of Jupit. though weak, notwithstanding the presence of ♄ therein, whose influence may eclipse but not extinguish the promised good, Ireland will also share in the effects of those Influences; ♂ in ☾ a human sign, menaces some Countries remote from England, as Muscovia, Tartaria, Swedeland, Westphalia, Bavaria, &c. ♄ his position in the 9. which is the House of Sea Voyages and long Journeys, shews some Shipwrack may casually happen, but not much to the detriment of such persons as venture their estates in that kind; so also may some small prejudice occur to the learned Clergy, and Divisions or controversies may arise in point of Religion, which I hope

hope may soon be settled by the prudence of the Magistrate who by the presence of Cauda Draconis in the Mid-heaven, may not escape malicious censures; & in the 6 is always the Prodromus of many diseases to ensue, occasioned from constricted blood, [viz.] Surfeits, Ebriety, and other intemperances carelessly minded by the sons of men; the same Position portends danger to the lesser kind of Cattle also; and further intimates, that servants this year will be too much prone to injure and wrong their Masters; a caution for Masters to be more than ordinary careful to prevent such fraudulent actions; Jupiter in the 5th, signifies men will very much prosecute their pleasures and delights, and women will not only be more pregnant, but more happy in bringing forth children, and with less danger than in some former years, and Mercury Lord of the ascendant in the dignity of Mars, and worthy of the Angle of Honour in to Jupiter Lord of the 7th. in the dignity of ♄, may also shew contests and unreasonable debates between man & man, under the presence of Justice; But Mercury being in ♄ with his dispositor, doth mitigate the matter, and may hasten such controversies to a sudden conclusion; but such disturbances may happen more particularly in such countreys as are supposed to be under the sign ♄; as Russia, Polonia, Sweden, Ireland, and divers other Countreys, which may take share of the conjunction of ♄ & Jupiter in July 15. happening in the constellation which governs them.

Having given good satisfaction in my last years Almanack to many, in publishing the nature and causes of Eclipses, I thought it not amiss to continue it this Year also.

The Eclipse of the Sun is caused by the direct interposition of the opacous body of the Moon between the Sun and us, which never happens but at the time of the *Novi-lunium*, or New Moon; and yet not in every New Moon, but then only when the Moon hath little or no latitude from the Ecliptick line; so that the Sun loseth no light; but only some part of the Earth is deprived of his glorious lustre, by the interposition of the body of the Moon between him and their sight: Hence Astronomers define, that it is *Interruptio luminis Solaris profecta; ex interposicione Lune inter Solem atque aspectum nostrum*; so that *Suidas* well observes, that *Solis eclipsis fit, quando Luna in ipsum incurrit*: Therefore it follows, that the Sun may be totally Eclipsed to some People, whilst others living remote (yet at the same time enjoying the Suns presence) may see the greatest obscurity not to exceed half his body: As in the Eclipse of the Sun that is to happen the 2. of July 1684. which will be nine years hence, the greatest obscurity at Rome will be 12. Digits, in England not above 8. Digits, and in Ireland little above 6. Digits; all which diversity in the *Phenomena*, ariseth from the great and various changes of the Moons parallax, in Altitude, Longitude and Latitude, of which you may see further in Mr. *Vincent Wings* Astro-

Astronomical Treatises, to which I refer you. But the Eclipse of the Moon is universal, and appears in all places of the same quantity and continuance, for the Moon being (as before said) an opacous body, and having no light but what she receives from the Sun, can never be Eclipsed, or lose the Suns light, but at the full Moon, when she hath little or no latitude, but is diametrically opposite to the Sun, and the Earth interposing between them (*recta in linea*) casting her shadow upon the Moon, and thereby depriving her of the Suns light, which may be more or less, according to the Moons latitude: Hence the Philosopher rightly defineth this defect, that it is *Privatio luminis in Luna, orta a diametrali terra inter Solem & Lunam oppositione*, so that it is to be observed, that in the Solar Eclipse, the Moon (by her proper motion from West to East) first enters upon the West Limb of the Sun, so the Suns Eclipse doth alwayes begin on the West-side, and end on the East: But the contrary appears in the Lunar Eclipse, for her motion being from West to East, the East part of her body must necessarily first enter the Earths shadow, and so her Eclipse alwayes begins on the East-side, and ends on the West.

A small Treatise how to judge of what weather may ensue by those Signes following.

IF the Sun at the time of his rising seem greater in the East then commonly appeareth, it shews there are many vapours, which will bring rain.

If in the West about Sun-setting there appeareth a thick black Cloud, it either sheweth rain that night, or the day following, because that cloud will want heat to disperse it.

If a black Cloud be in the East, in which the Sun soon after his rising is hid, it will dissolve it, and rain will ensue that day; or if Vapours are seen to ascend upon it, it is a certain sign of raine.

If the Sun or Moon look pale, look for raine; if fair and bright, faire weather; but if red, winds, as the Verse hath it:

Pallida Luna pluit, rubicunda flat, alla serenat.

If the Sky be red in the morning, it is a signe of wind and raine, or both, because those Vapours which cause the redness will presently be resolved into rain; but if the sky be red in the evening, it is a token of a fair night to ensue.

If Mists come down from the Hills, or seem to descend from the Heavens, and settle in the Vallies, it presageth hot weather; Mists in the Evening portend a hot day to ensue; the same when white Mists arise from the waters in the evening.

The re-sounding of the sea upon the shore, and the murmur of winds in the woods, without apparent winds, shew wind to follow, for such winds breathing chiefly out of the earth are not quickly perceived.

The often changing of the wind doth many times shew stormy weather.

When there is no dew at such times as usually there is, it fore-sheweth raine, because the matter of the dew is turned into watry clouds. If

If in the North-west before day-light end, there appears a company of little small black Clouds like flocks of sheep, it is a certain signe of raine.

If the wind continue any considerable time in the South, it is a certain signe of raine.

If the Sun at his rising be encompassed with a Circle, and drive away the clouds before him westward, it signifies fair weather.

The obscuring of the smaller Stars in a clear night is a signe of raine.

The shooting of the Stars shew wind from that coast the star came.

If the Summer be moist and cloudy, it's bad for Corn and Fruit.

If the Rain-bow appear when it is fair, it is a signe of foul weather; the same if two Raine-bows appear: A rain-bow presently after rain shews fair weather, if it be very green, rain; if red, winds; if it be seen in the morning, it shews moisture; in the evening fair weather: but you are to observe there are two sorts of Rain-bows, one of the Sun, another of the Moon; that of the Sun appearing by day, and that of the Moon by night, and more seldom than that of the Sun.

If the Moon the Fourth day after her Change have a Circle or hollow about her, winds and rain; a Circle about her neer the full Moon, sheweth winds from that part that the circle is most splendid and bright; if her horn at her rising shew more gross and thick than ordinary, expect store of rain suddenly to ensue.

If the Stars appear bright, blazing, and big, then ordinary, great winds & moisture in the part where they appear; In Winter frost and cold. If dim Stars appear with tails, it shews wind and drought, and the more, the greater.

If in the Winter-time the sky be full of Stars, and the wind Eastward, look for hard frost; but in Summer heat. If the Stars seem few, and cast little light, change of weather. If they seem to run, shoot or fall, wind from that part, and tempestuous weather.

Water-fowls. (as Sea-gulls, More-hens, &c.) when they gather together in flocks and companies, and fly from the sea towards the shore, and contrariwise, Land-birds, (as Crows, Swallows, &c.) when they fly from the Land to the waters, and beat the waters with their wings, foreshew wind and rain, Aches, Hurts, and Coughs in men full of rain; predicts frost or rain. Solid bodies, as walls, stones, and pavements, when they swell, so also Earth-worms come forth, Moles cast up more then ordinary, and Fleas, Flies, and Gnats bite more then ordinary, is sign of rain. The falling of soot from Chimneys, Cattel eating greedily and licking their hoofs, croaking of Frogs, the creaking of wainscot, Plaster falling from walls, if the fire hush and keep a noise, or burn pale, if the Spinner work hastily in the Air, the Aunt busied with her eggs, or the Bees in fair weather not going far from home, all these are signs of foul weather to follow.

Winter-birds, (as wood-cocks, Field-fares, &c.) if they come sooner then ordinary, and out of the Northern Countreys, do (with us) shew cold winter.

So the Swallow and Cuckoo that come toward Summer, if they come early, shew a hot summer to follow.

Great store of Haws and Hops, do commonly portend hard and frosty winters.

*A most Useful TABLE, shewing the Bearing,
Distance and Height of the Poles of the Chiefest
Cities and Towns of England, from the Famous
City of LONDON.*

The Use of the Preceding Table.

THe Table is divided into 3 Columns, and each of them again divided into 2 Columns, where- of the 1st. contains the price of the l. and in the 2d. the price of the C. and is very useful for all such as buy or sell by retail, or otherwise deal by the gross C. for if you have the price of the l. against it in the right hand Column you have the price of the C. and if you have the price of the C. against it in the left hand Column you have the price of the l. as near as may be.

Example.

If a Commodity be sold for 7 d. the l. seek 7 d. in the 1st. Column, and against it toward the right hand, you shall have 3 l. 5 s. 8 d. and if the pound be 15 pence half penny, on the right hand column you shall have 7 l. 4 s. and 8 d. so if a commodity cost 9 l. 16 s. the C. seek 9 l. 16 s. in the right hand column; and on the left hand thereof you shall have 21 d. or if it cost 9 l. 16 s. & 8 d. there will answer upon the left thereof 12 d. half peny; and so of any other price whatsoever; Observe where you have 1, 2 & 3 in the Column of farthings, it signifies 1 farthing, 2 farthings, 3 farthings

You'r welcom Readers. now my work is done,
The year is ending where it first begun :

If Printers faults, or mine, you chance to spie,
Read them with spectacles of Charity.

I plainly write to serve my Countrey friend,
If he be pleas'd I reach my wish'd for end.

Courteous

IT hath pleased God since the writing of my last Almanack, that I received a very sad accident, by breaking a legg, upon which it was very much reported abroad, both in City and Country that I was dead of the said hurt.

These are therefore to advertize the world, that I am, I praise God, well recovered to my former health, and am ready as formerly, at home, to attend any that shall have any occasion from 7. in the morning, till one or two afternoon: For deafness I have a present Remedy, if curable; and I have an excellent Powder, which kills all sorts of worms; and an incomparable Antiscorbutick Pill, which perfectly cures the scurvy, and any other diseases complicated therewith: If not too far gone, they cure any Venereal distemper, if not too much radicalled, and cures all pains in the head, back, stomach, and sides; In short they purge all putrified humors, and preserve the body from corruption, so long as nature can be preserved in that quality: You may also be furnished with that great Antidote of *Van Helmont*, *Paracelsus*, and *Crullius*, by them called *Elixir propriatissimum*, the greatest Cordial and only Medicine in the world for long and sound life, restoring nature even at the point of death, and effectually taking away the seeds of all diseases, with directions in print as to its use, and particular virtues: The price one ounce at 4. s. and half an ounce 2. s. in Glasses weighed ready to any that come or send.

From my House at the sign of the Royal Oak in the Still-yard upon Great Tower-hill. between the sign of the Red Cow, and the Gun Tavern, July the 18th 1675.
